1 Full-time Workhorse

2 Lunch-Peak Specialist

3 Super Stacker

4 Dinner-Peak Core

Rider profile

<Persona Profile> You are a **Super Stacker**.
<Description>, <Statistics>

<Description> You are an efficiency master who maximizes income by skillfully handling complex, multi-order trips. Your core strategy is to accept long, complex 'waves' of orders. A simple, single order is less attractive to you.

<Statistics> "statistics": {"avg_daily_work_duration": 4.93, "stacked_order_ratio": 0.857, "avg_wave_distance": 15144.4, "time_fragmentation": 19.9}

Task and agent setting

Order broadcasting

<Order> Available orders: {<PickLoc>, <DeliverLoc>, <Fee>, <ExpectTime> }

Agent Rider

<current location>, <Memory>

<Chain of Thoughts (COT) reasoning>

1. <Perception> Received four delivery offers—two at ¥6.00 (Orders 1 & 4) and two at ¥3.00 (Orders 2 & 3). Orders 2 & 4 share a pickup location. All pickups are near my idle position; deliveries are clustered to the north/north-east.

2. <Evaluation> As a 'Super Stacker', I aim to maximize income via multi-order trips. The shared pickup (Orders 2 & 4) and overall proximity support a high-value stack. Combined fee of ¥18.00 is compelling.",

3. <Planning> Pick up Orders 1 & 3 first, then proceed to shared pickup for Orders 2 & 4. Deliver in sequence: Order 3 → Order 2 → Order 1 → Order 4, optimizing route and promised times.

4. <Decision> Accept all four orders using planned routing strategy to form a profitable stack.

Memory

<Memory>: You have completed {total_completed_orders} orders in total, earning ¥{self.total_earnings:.2f}. f"Here is a summary of your last {len(recent_history_to_show)} orders:\n
